

Tutankhamun's Tomb

Who Found His Tomb?

The tomb was found by a group of researchers lead by Howard Carter. It was discovered in 1922, which means that all of the treasures and the body inside have been left in very good condition. Carter worked out from other important finds that the tomb would be in the Valley of the Kings. A man named Theodore Davis found a cup with Tutankhamun and his wife on it. This was a clue that helped Carter find the tomb.

What They Found Inside

Inside the tomb they found over 3000 treasures meant for Tutankhamun to take with him into the afterlife. Many of the items were made from, or covered in, gold – perfect for a king. The tomb was split into many different rooms. Most of the rooms were for the objects, apart from the burial chamber which just held his sarcophagus (a decorated stone coffin).
