

## **Home Learning - Science**

## **Session 3**

L.O - To understand how animals adapt to survive in different environments.

**Well done for completing your experiment!**

What did you find?

Were your predictions correct?

If you were to do the experiment again, what would you change?

Tell someone else about your experiment and what you found.

This experiment shows that some beaks are better at collecting different items of food.

Write down answers to the following:

Why do you think some beaks were better at collecting different items of food?

What do you think would happen to animals that did not adapt their beaks?

How did you make your test fair?

What could you do to improve your experiment?
