Maurice Sendak published his picture book 'Where the wild things are' in 1963! It has proved so popular that it has never been out of print since.

Today we are going to copy one of his 'wild things'. On the next page I have started a drawing- can you add the lines that are missing? Look closely at the finished picture to check they are in the right place.

What brings the wild things to life are all the textures and shading Maurice Sendak uses. I have used a black biro and coloured pencils in my drawing. Can you do the same? Have you noticed the darkest areas are under his legs and chin and between his teeth...there is a good place to start.
